Subject Duhring Resources on FSR 148

Regarding their illegal pipeline installation... I have reviewed this case and I need more information before I can proceed. First off... did they simply move an approved and proposed pipeline installation or did they put in an all new pipeline that wasn't even proposed? Secondly... what are the damages incurred by the government? I need both a monetary value as well as a description of what the damages are. Third... regarding the conversation Sheldon had with Arthur Stewart I need to know specifically what was said when he was questioned about this..... Did he take responsibility? Who actually did it? What repairs and/or amends did they make? What actual date did this happen?

Something else to consider is that do we have to proceed criminally or can this be worked out between both sides where the damages are fixed and the problem is solved?

Please fill me in with more of the pieces guys. I have no problem investigating and looking into this stuff, but usually I need more info than this. I think we have it as well it's just a matter of getting it to me.
Thanks.
