**Plan of Operations for Warrant 3672, Forest County, for the development of roads
and locations for Wells 3672-16, 3672-18, 3672-24, 3672-26**

Submitted to the Allegheny National Forest May 9, 2008

Duhring Resource Company (Duhring) is planning to further develop its property rights on Warrant 3672, Forest County, Pennsylvania, through the development of additional locations for wells to be drilled. This is an expansion of the original Plan of Operations submitted by Duhring in June 2007.

Duhring Resource Company is planning to construct four additional wells upon Warrant 3672. (Well number 20 was included in the original Plan submitted June, 2007, but was overlooked by the ANF timber marking crew.) Improvements will include roads to the wells, well locations, and any support structures (culverts, silt fence, pipelines, etc.) that will be needed to build well locations and complete and produce the wells. The roads, locations, and support structures will be constructed according to the typical specifications for oil and gas development as provided by the Pennsylvania Department of Environmental Protection publication #550-0300-001, the Oil and Gas Operators Manual, and the Soil Erosion and Sediment Control Plan as prepared by Hampson Surveying, May, 2008. All operations will be performed to limit erosion and sedimentation, and impact upon the land.

Construction of the roads, tank battery and well locations will utilize a mineral pit to be developed upon the parcel. In concert with the ANF field representative Duhring has explored for and located satisfactory stone upon Warrant 3672; that area is adjacent to well 3672-25.

Roads have been located in the field and are shown, in the field, by flagging upon the centerline. Road and well layout are depicted in the enclosures. Pipelines are depicted in the enclosures only generally, as conditions in the field dictate specific locations. However, wherever possible, pipelines are installed beneath roadways in order to minimize areas of surface disturbance. Two pipelines are not located in roadways, those being the pipeline between wells 25 and 18 and the pipeline replacement to well 11. Other surface facilities associated with pipelines such as drips, separators, meter stations and the like will be installed upon or adjacent to pipelines. Tank battery and well

location facilities will be constructed in a fashion similar to existing facilities constructed by Duhring elsewhere upon ANF surface.

This project will necessitate the removal of timber in order to make way for the roads and other surface activities described above. Duhring will make its field representative available so that the "two-stripe" boundary work can be done in concert. (Please note: the two-stripe area unilaterally painted by ANF personnel at well 3672-20 is not of sufficient size.) Please notify Duhring's field representative of available dates and times. The ANF is advised that it should market the aforesaid timber inasmuch as Duhring does not intend to purchase or otherwise handle the timber.

The date of commencement of operations for the wells referenced herein will be 60 days from the date of the ANF's receipt of this plan of operations. Concerning that date your attention is directed to the document entitled "SURFACE OWNER NOTIFICATION" also enclosed herein. The SURFACE OWNER NOTIFICATION sets forth Duhring's intentions and expectations concerning ANF response dates and related items.

Enclosed are the following documents:

- Land Owner Notification
- Surface Owner Notification
- Erosion and Sediment Control Plan
- Designated Field Representative
- Maps of the project area
